1- Objectives defined for the proposed training:

Objectives of the doctoral training:

Objectives related to the training of trainers:

Preparing and developing human competencies that can be relied upon in both the scientific and economic fields. In the scientific aspect, this is reflected in the preparation of researchers and professors in the field of business management and entrepreneurship. In the economic aspect, it involves providing administrative competencies to develop economic institutions and elevate them to the rank of leading institutions, activating modern intellectual and creative trends that aim to achieve success and stability for the organization. It also contributes to creating an entrepreneurial spirit that enables a shift towards the field of self-employment and individual initiatives, leading to the creation of self-employment opportunities and making a significant contribution to achieving economic development.

Objectives related to research:

The main objectives can be defined as follows:

- Meeting the needs of the economic sector in terms of research and scientific models in management and administration.
- Contributing to the integration of modern management methods and patterns in the field of business management and entrepreneurship.
- Highlighting various dimensions of business management through the research conducted by doctoral students, which include presentations at conferences, seminars, and study days.
- Addressing administrative and managerial issues through the results obtained and the suggestions made by researchers, generally aimed at enabling the construction of management models at the level of national economic institutions to enhance operational competencies, functional performance, and direct scientific and technical resources to achieve set goals.
- Researching the importance of entrepreneurship education and spreading entrepreneurial culture due to its benefits and positive effects on individuals and society, leading to sustainable development.
- Instilling an entrepreneurial spirit, activating exceptional capabilities, discovering innovative skills, and increasing the likelihood of developing innovative ideas that lead to high-tech business projects and entrepreneurial projects aimed at producing leaders and increasing the chances of success in businesses related to cognitive trends. This includes generating wealth, accumulating capital, absorbing unemployment, and producing goods/services intended to serve the economy, thus supporting the foundation of the knowledge economy in our country and producing creative young entrepreneurs.
